

## **CLEAN VERSION OF CLAIMS**

Claim 1. A plural coil tape product comprising:

a first coil extending from a first end to a second end of the coil along a first coil axis;  
at least a second coil extending generally from a first end to a second end of the coil along a second coil axis; and  
the second coil intersecting the first coil in at least partially overlapping side by side relation in a first intersection along the first and second coil axes;

wherein:

the first intersection forms an internal truss comprising portions of the first and second coils; and

a respective plurality of similarly formed internal trusses generally form a repeating pattern of upright ovals along the first and second coil axes when viewed from a side in a deployed state.

Claim 2. The plural coil tape product of claim 1, wherein:

the internal truss comprising portions of the first and second coils; and

the respective plurality of similarly formed internal trusses generally form a zig zag pattern along the first and second coil axes when viewed from above in a partially deployed state.

Claim 3. The plural coil tape product of claim 1, wherein:

the internal truss comprises portions of the first and second coils; and

the internal truss forms a generally upright linear configuration as viewed from an axial end in a fully deployed state.

Claim 4. The plural coil tap product of claim 3, further comprising a third coil intersecting the first and second coils in at least one circumferential position of each of the first and second coils.
